

POWDER COAT

Our TGIC powder-coating averages 8-10 mils (200-250 microns) thick and is applied in-house to ensure the highest level of quality. Offered in 15 standard, satin and metallic colors, plus a full range of RAL colors with available color matching. Additional cost may apply. One of the key elements of the strength, longevity, and durability of Victor Stanley products is their extremely high-quality finish, applied in a complex process which we call Publicote™. This complex and thorough process results in a coating more than twice as thick as the industry standard. The entire process utilizes no toxic solvents, yields no particles of combustion and represents our ongoing commitment to operating a modern, effective manufacturing process in a responsible and environmentally sound manner.

RECYCLED PLASTIC SLATS + WOOD SLATS

We offer both standard recycled slats and our 2nd Site Systems® slats that combine recycled plastic with a reinforcing A36 steel bar to make it “plug-compatible” with the best wood slats available. Our attractive and durable recycled slats shed water, resist rot, and are easily cleaned. Slats include UV inhibitors, resemble wood, and come in Black, Espresso, Light Gray, Wheat.

Kebony is a sustainably sourced wood enhanced through an innovative, eco-friendly process called furfurylation. This patented technique infuses softwoods, boosting durability, stability, and resistance to decay. Kebony requires minimal maintenance—simply allow it to naturally weather to a beautiful silver tone, similar to ipe. Sourced responsibly, Kebony reduces pressure on endangered hardwoods and offers an environmentally friendly solution without harmful chemicals. Kebony combines beauty, strength, and sustainability to deliver a lasting and low-impact choice for outdoor furnishings.

A remarkable South American hardwood, ipe is known for its durability and resilience. Often likened to South American teak, this naturally dense and hard wood features a light brown hue that weathers to a distinguished silver. Ipe’s natural resistance to rot and insect damage makes it ideal for site furnishings that endure heavy public use. Its strength significantly reduces susceptibility to vandalism, while each piece’s unique color variation brings a one-of-a-kind character. Weathering may occur on site which will alter the color of the wood over time.
